THE ART OF DOORS THAT TELL YOUR STORY

ROKA is an expert in transforming doors into unique elements of a space that fully reflect the personality of their owners. Our philosophy, based on fundamental principles, constantly guides our work and influences every project. These values, essential to our brand, shape our present and our future, allowing us to create products that are not only aesthetically pleasing, but also inspiring, perfectly meeting the individual needs of our customers.

HERITAGE MASTERY

Our creations are a tribute to the history and symbolism doors have carried for centuries. Honoring their traditional role in architecture, we give them a new artistic dimension — creating personalized pieces that tell their own unique stories. Combining decades of expertise with a passion for craftsmanship and innovative technology, we design products where precision meets modern vision. Each door becomes not only a functional element, but also a personal statement within a space.

VISIONARY BOLDNESS

At ROKA, we believe courage opens new possibilities. From the very beginning, our mission has been to create the finest doors in the world. We do not shy away from challenges — reaching for materials and finishes once reserved for the most prestigious entrances. Every project is an exploration, where refined design meets advanced technology. The result? Creations that inspire self-expression and push the boundaries of design.

TIMELESS INNOVATION

For us, innovation is not a passing trend, but a lasting value. With advanced technologies — from state-of-the-art security systems to superior insulation — our doors unite style with functionality and respond to the demands of modern living. It is the ability to combine classical aesthetics with the technology of the future. Each project remains beautiful in form, yet flexible enough to adapt to the evolving needs of its users.

UNCOMPROMISING CRAFTSMANSHIP

Passion and precision are woven into ROKA's DNA. Each door is created through a carefully considered process, where the choice of materials and attention to detail reflect an uncompromising pursuit of perfection. From concept to production, artisanal precision at every stage ensures exceptional quality. Modern design harmonizes with traditional craftsmanship, resulting in striking pieces that express individuality. At ROKA, every detail matters.

SUSTAINABILITY REDEFINED

At ROKA, aesthetics and responsibility go hand in hand. Each product is the outcome of combining innovative solutions with environmental awareness, all while minimizing our carbon footprint. Our doors offer not only style and performance, but also a commitment to the planet's future. We redefine the relationship between beauty and responsibility, proving that design can be both captivating and sustainable.

STEEL WITH THE FUTURE IN MIND BEAUTY BEYOND FORM

In a world where design is increasingly defined by responsibility, steel stands out as an extraordinary material: durable, fully renewable, and resistant to time. At ROKA, we see it not simply as a resource, but as a conscious

material — one that serves both people and the environment. The Steel Collection was created for those who wish to choose wisely: combining aesthetics with functionality and a genuine care for the common good.

STEEL - A MATERIAL FOR THE FUTURE

At ROKA, we see steel not merely as a raw material, but as a conscious choice — a symbol of durability, quality, and responsibility. The Steel Collection was created to prove that beauty and environmental care can go hand in hand. These doors are not just architectural elements, but a manifesto of a modern approach to design.

A SUSTAINABLE LIFECYCLE

The steel used in our products often comes from recycled sources — for example, from the demolition of urban structures. In this way, materials are given a second life, reborn in a new form and function. When we design, we look beyond production itself: we consider the entire lifecycle of the product — from sourcing, through manufacturing, to the possibility of reuse.

LESS WASTE, MORE VALUE

Precision and responsibility lie at the heart of our process. We strive to use every piece of steel, and what remains is returned to the cycle. In this way, we minimize waste and create a seamless value chain, where every design decision has meaning — not only aesthetic, but ecological as well.

AESTHETICS WITH RESPONSIBILITY

We believe design should never have to choose between beauty and responsibility. ROKA steel doors embody the harmony of form and function, elegance and care for the planet. They are timeless solutions — perfect in detail, yet consciously aligned with the principles of sustainable design.

ROKA — A CONSCIOUS CHOICE

Choosing a door is more than an aesthetic decision — it is a declaration of values. By selecting the Steel Collection, you become part of an idea in which durability, respect for material, and care for the planet are just as important as appearance. It is a conscious choice that reflects how we want to live, dwell, and shape the future.

A SPACE OF LIGHT, CONNECTION, AND WELL-BEING

Every interior begins with light. It sets the rhythm of a space, shapes its mood, and becomes a natural source of energy. A ray of sunlight filtering through glass can transform the everyday — bringing lightness, inspiring creativity, and drawing people closer together.

The Steel Collection was born out of a desire to create interiors that are bright, open, and conducive to connection. Steel doors and glass partitions are more than architectural elements — they are tools for consciously designing spaces where we feel comfortable, both on our own and in the company of others.

The biophilic trend — the innate need for contact with nature, light, and human presence — is increasingly shaping contemporary architecture. We seek spaces that unite rather than divide. Solutions that foster togetherness without sacrificing comfort or privacy.

Glazing in the Steel Collection allows light and energy to flow seamlessly between rooms, while maintaining a modern, minimalist character.

Transparency and openness today are not only values but essential needs — especially in homes designed to nurture closeness and strengthen everyday relationships. Slim steel frames and glass panels strike a balance between privacy and integration, bringing harmony and coherence to interiors.

With a wide choice of glass types — from crystal clear to soft satin — you can tailor the level of privacy to your needs without giving up a sense of openness. This is a solution for those who appreciate modern aesthetics and understand that a truly beautiful interior is one in which life simply feels good. Together.

Konrad, in recent years glass doors and partitions have become extremely popular. Where do you think this interest comes from?

Konrad Motyka: It stems from the growing need to create spaces that are bright, open, and harmonious. Glass allows us to maintain visual connection, brings in natural light, and at the same time subtly defines zones without fully closing them off. It is an approach deeply rooted in contemporary architecture — both aesthetically and functionally.

But the Steel Collection is not just about individual doors or walls, is it?

KM: Exactly. What sets the Steel Collection apart is that it is a complete architectural system. Interior and exterior doors, partitions, and even windows — all designed to come together in a coherent whole. This offers tremendous potential, both aesthetically and functionally. Room layouts can be shaped very individually, depending on the needs of the investor and the vision of the architect.

What opportunities does the system give architects? Is there room for personalization?

KM: Absolutely. The Steel Collection provides a very wide field for design interpretation — from the dimensions and glazing layout to the shape and placement of muntins.

For an architect, this is a huge advantage: the ability to adapt the product perfectly to the character, proportions, and function of a space, while being assured of precision and stylistic consistency.

What role does light play in the context of this collection?

KM: Light is not just a compositional element — it is a factor that directly affects the user's well-being. Thanks to extensive glazing, natural daylight penetrates deep into interiors, brightening them and making them friendlier, more dynamic, and more comfortable. This is particularly important in the context of the biophilic trend — we want to live in environments that foster balance, connection with nature, and human relationships.

And for you, as an architect, what is the greatest value of this collection?

KM: For me, the greatest value is the combination of design freedom with uncompromising attention to detail. Steel offers immense creative possibilities while ensuring consistency and aesthetics of the highest standard. For an architect, this means true comfort — we can design boldly and be confident of the outcome. It is a rare combination, and one I particularly appreciate.

Unusual doors often take you to the unusual worlds

- Mehmet Murat ildan

Steel collection highlights

14 — 19

ONE COLLECTION. INFINITE DESIGN POSSIBILITIES.

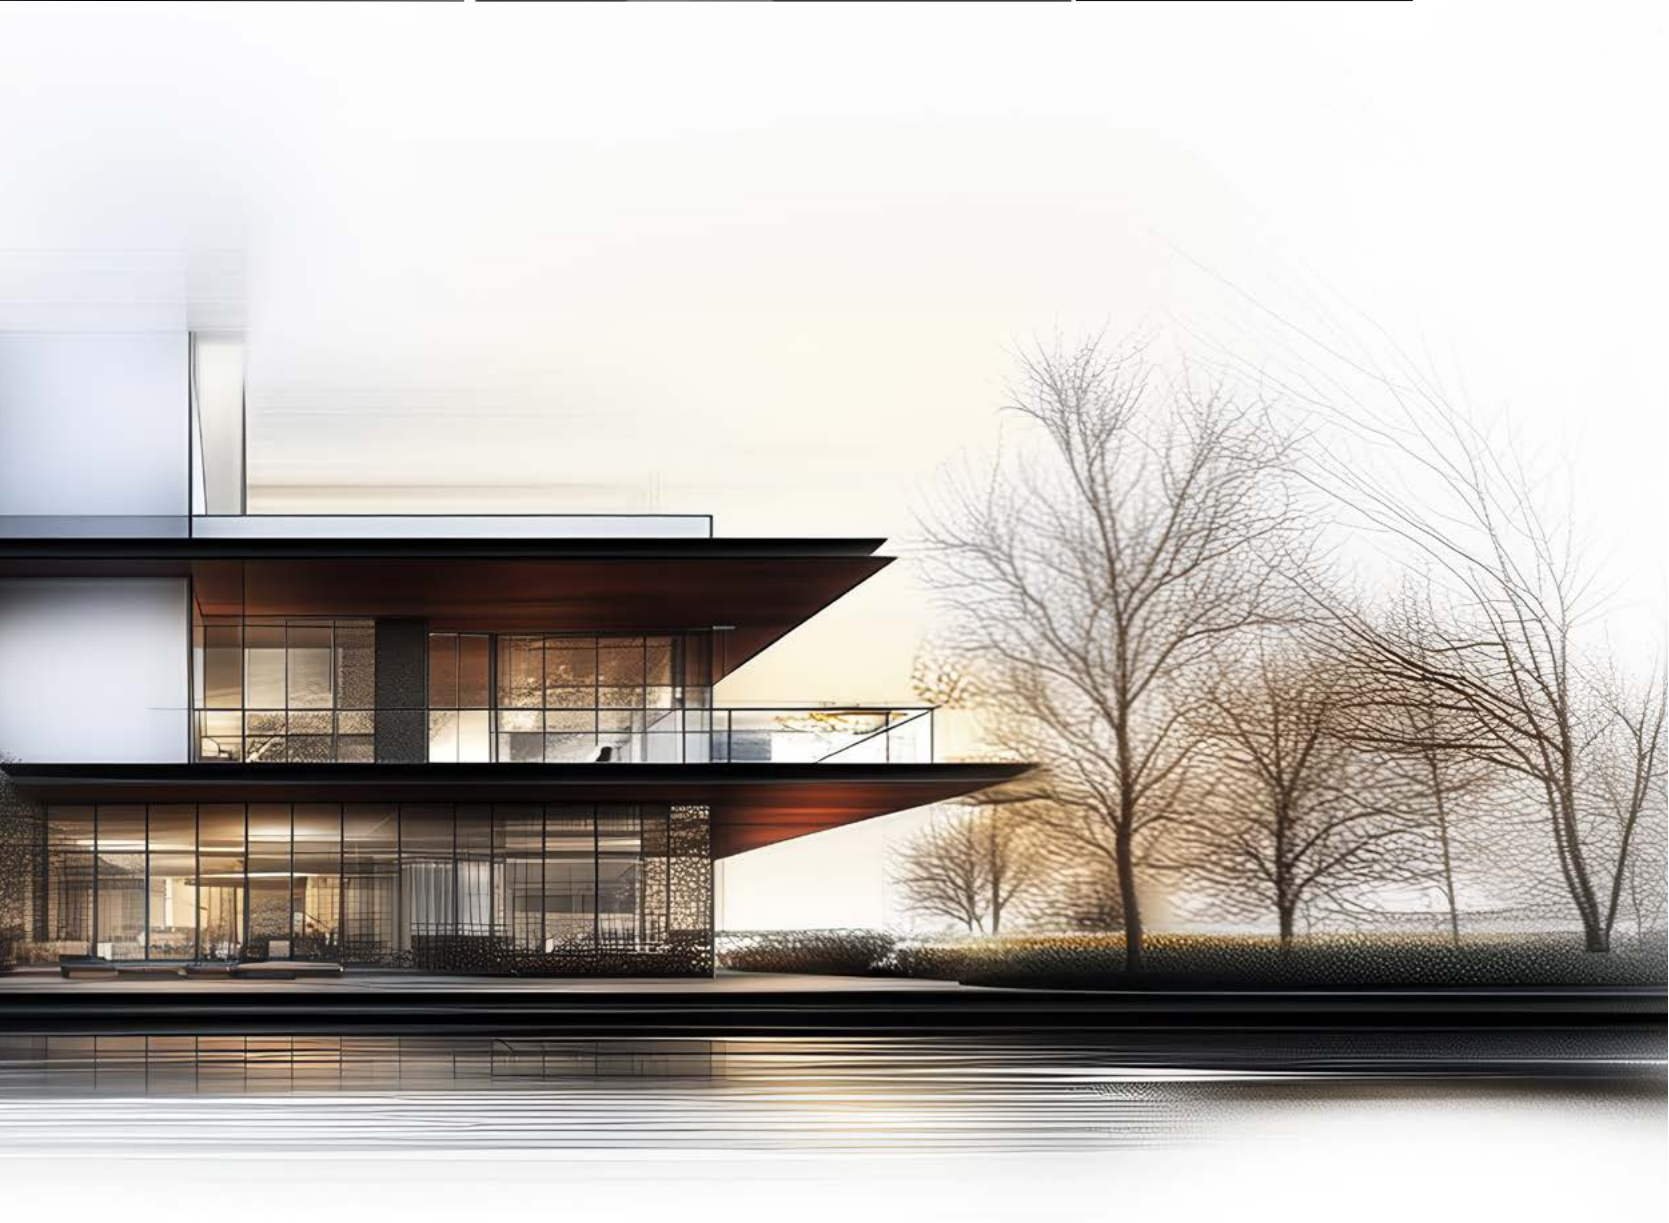

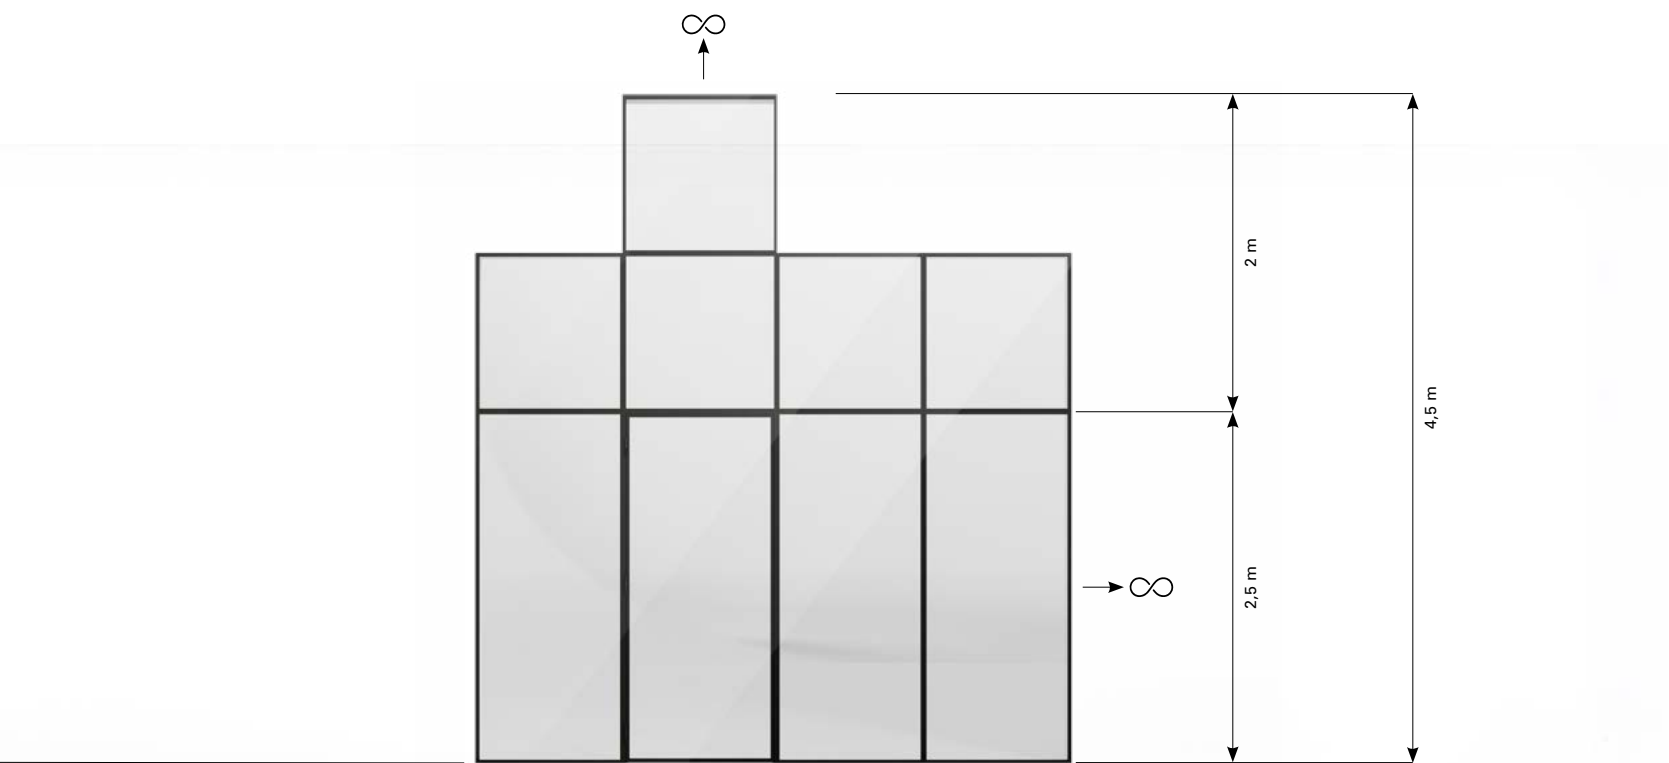

The Steel Collection is more than just doors — it is a complete architectural system that gives designers full freedom to realize their creative visions.

With a unified design language spanning entrance doors, interior doors, partitions, and windows, the Steel Collection allows the creation of cohesive, refined architectural concepts — from the façade to the smallest interior detail. It is a guarantee of elegance, harmony, and timeless prestige, visible from the very first glance.

Full customization, tailored to your vision.

The system offers exceptional flexibility. Choose the product type, dimensions, shape, muntin layout, profile material, finish, and glass type — to create a solution perfectly adapted to the space. For architects, it is a powerful creative tool; for homeowners, a way to express personality through unique, made-to-measure details.

MORE LIGHT.
MORE SPACE.
MORE STYLE.

Steel-framed glass doors and partitions combine visual lightness with full functionality. They bring natural daylight deep into the interior, adding a sense of openness and clarity while clearly defining zones. In residential projects, they introduce elegance and brightness. In commercial spaces, they elevate the project's prestige while maintaining a clear functional layout.

One idea. Many applications. Cohesive elegance.

The versatility of the Steel Collection reveals

itself in every context. A glass wall between the dining room and the living area defines zones without isolating them. In an entrance hall, it connects indoors with outdoors, providing protection without sacrificing transparency. In boutiques, matching storefronts and entrance doors create a luxurious invitation. In galleries and showrooms, slim frames highlight what matters most. One concept, many interpretations — where style meets functionality.

LOFT OR MINIMALISM?
DEFINE YOUR STYLE — WITHOUT COMPROMISE.

Glass doors and partitions harmoniously adapt to any aesthetic — from industrial to contemporary to timeless.

Whether you envision a bold loft or a minimalist retreat, our system adjusts seamlessly to your vision. Frame geometry, muntin arrangement, and finishes — every detail offers the freedom to shape a space that reflects your personal style.”

The precision of steel. The sophistication of brass. Unmatched refinement.

Steel profiles are slim and subtle — with invisible welds and flawlessly smooth surfaces. Brass frames add warmth and a touch of luxury. Decorative finishing techniques, such

as liquid metal coatings, make it possible to achieve striking, bespoke effects. For architects, it is a field of creative expression; for clients, a defining accent that gives interiors a truly distinctive character.

Pivot glass doors — minimalist beauty combined with innovative function.

With their offset axis, pivot doors open in both directions, ensuring smooth and intuitive movement. Their frameless design emphasizes clarity and purity of form. Perfect for spaces where every detail matters — where contemporary elegance meets architectural intelligence.

Contemporary interior and architectural design is much more than aesthetics. It is the art of composing light, space and function in a coherent and harmonious way. That's why the Steel collection doesn't stop at doors - it's a complete system that includes both interior and exterior doors, partitions and windows, creating a unified and refined whole.

Exterior Doors and Walls — Elegance and the Power of First Impressions

In public and commercial spaces — but equally in modern homes — the entrance is more than just a point of access. It is an architectural statement: a feature that welcomes, sets the tone, and defines the atmosphere of a place. Steel doors and wall systems are perfectly suited to this role, combining distinctive aesthetics with exceptional durability and full functionality.

When paired with expansive glazing, steel structures create a transparent barrier that protects without isolating. Natural light flows freely inside, imparting a refined, contemporary character. It is the ideal solution for boutiques, galleries, showrooms, or offices — places where first impressions are as important as functionality. A glazed steel-framed entrance not only highlights the prestige of the space but also preserves visual connection with the surroundings.

The system allows modular layouts that can be configured to meet the specific needs of each project. Both commercial and private investors can therefore rely on bespoke solutions — durable, refined, and fully integrated with the rest of the interior.

In the Steel Collection, windows become an integral part of the architectural system. Designed with the same precision and philosophy as the doors and partitions, they complete the whole both aesthetically and technologically. Sharing the same profiles, proportions, and design language, they ensure a consistent and elegant layout throughout the building.

This is particularly relevant in modern architecture, where the boundaries between indoors and outdoors are increasingly blurred. Slim steel frames and high-performance glazing emphasize visual continuity and bring the maximum amount of daylight into the interior.

We offer complete design flexibility: windows can be fixed or operable, with a vari-

ety of muntin arrangements, and produced in any size to match the architect's vision. Importantly, all elements — windows, doors, partitions — can be finished in the same color palette and surface treatments, ensuring visual harmony across the entire project.

As a result, the investor does not need to compromise. They receive a complete, cohesive system that unites design, functionality, and durability in a contemporary architectural solution. The Steel system is not a single product, but a comprehensive tool for creating harmonious, light-filled, and open spaces that encourage connection, work, and relaxation. For the architect — freedom of design. For the user — the comfort of everyday life in a space that simply works.

CREATIVITY IN DESIGN

In architecture and design, it is the details that form the heart of a project. ROKA solutions embody this philosophy perfectly. We offer a wide range of fanlights and sidelights that can be fully customized to the individual needs and character of any entrance area. Our innovative approach to design makes it possible to create unique, functional solutions that seamlessly combine everyday practicality with personal style and harmonize with the architecture of the building.

A PERFECT MATCH

Whether you prefer modern minimalism or timeless elegance, ROKA's diverse designs make it possible to realize your vision of the ideal entrance. Each solution is not only a functional element but also an aesthetic accent — highlighting the character of the space and creating a lasting first impression of style. Discover the possibilities of ROKA systems and design a distinctive entrance area that reflects your taste and contemporary approach to design.

Interior system

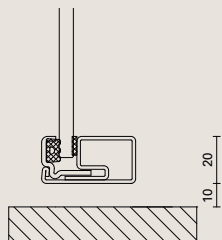

HINGED DOORS

Timeless simplicity, redefined. A classic concept executed with modern precision. Hinged doors in this collection offer quiet elegance and enduring quality, making them suitable for both residential and commercial interiors.

The choice of glass types allows for tailored levels of visibility and light control, adding both function and subtle atmosphere to the space.

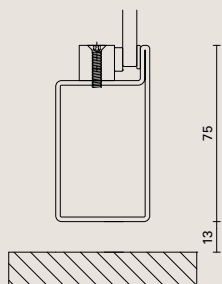

This is a solution that offers clear architectural definition — without compromising on light, clarity, or style.

PIVOT DOORS

Technically advanced, visually minimal. Instead of traditional hinges, a pivot mechanism is discreetly mounted to the floor and ceiling. The absence of a door frame enhances visual lightness, while the door's pure geometry integrates seamlessly with the surrounding architecture.

Pivot doors open in both directions, and the built-in soft-close mechanism with a 90° hold position ensures smooth, intuitive use. When paired with glass, the door becomes more than a divider — it becomes a passage for light, enriching the spatial experience.

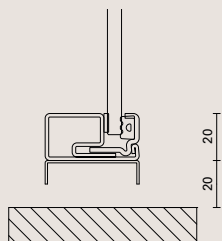

SLIDING DOORS

Minimal in appearance, exceptional in function. The linear motion of sliding doors creates adaptable zones within a space — without swing clearance or interference with furniture layouts.

Ideal for compact interiors, but equally effective in large-scale environments where uninterrupted light and visual flow are key. The slim, precision-engineered track system keeps the movement quiet and effortless.

Combined with glass, sliding doors define space without blocking it — letting light move freely from one room to another.

Exterior system

Steel and glass exterior doors are more than just a transition; they are an architectural statement that combines aesthetics with functionality. The Steel Collection offers weather-resistant systems with superior insulation and a distinctive design, perfect for prestigious spaces.

Sleek steel profiles and large-format glazing create an elegant entrance that emphasises the character of the building, whether it be an art gallery, boutique, modern office or private residence. It's a solution that makes an impression from the moment you step inside — durable, secure and exceptionally attractive.

EXTERIOR DOORS

Steel and glass exterior doors are the ideal solution for places of high aesthetics - art galleries, boutiques, prestigious investments. Slender steel profiles combined with large glazing create an elegant form that maintains full functionality and resistance to external conditions.

WINDOWS

Window systems made of steel with thin, thermally insulating profiles are the answer to the needs of modern architecture, where slenderness, structural stability, and maximum glazing area are important. Thanks to technologically advanced steel profiles, large, stable glazings with extremely narrow frames can be created without compromising thermal performance.

FIXED PANELS

Architectural purity and structural precision. Fixed panels are ideal for spaces that require maximum light, slim profiles, and reliable statics. Thin-section steel systems allow for the creation of large, non-openable glazing that remains visually light while meeting the highest insulation and durability requirements.
